

# **Recent Advances in Nucleosides: Chemistry and Chemotherapy**

Edited by *CK Chu*

## **Contents**

1. Mission oriented research: an experience in Dr. Jack Fox's laboratory  
(K. Watanabe).
2. Development of new radical reactions with a vinylsilyl group and their application to the synthesis of branched-chain sugar nucleosides  
(S. Shuto *et al.*).
3. Synthesis of purine acyclonucleosides via ribofuranose-ring cleavage of purine nucleosides by diisobutylaluminum hydride  
(Y. Monguchi *et al.*).
4. The chemistry of nucleoside and dinucleotide inhibitors of inosine monophosphate dehydrogenase (IMPDH)  
(K. Pankiewicz, B.M. Goldstein).
5. Nucleoside prodrugs  
(J.S. Cooperwood *et al.*).
6. Antiviral Isonucleosides: discovery, chemistry and chemical biology  
(V. Nair).
7. Synthesis and biological activity of isopolar acyclic nucleotide analogs (A. Holy).
8. Synthesis of pyranose nucleosides and related nucleosides with a six-membered carbohydrate mimic  
(P. Herdewijn).
9. 5'-Norcarbanucleosides in L-like configurations  
(S. Schneller *et al.*).
10. Tricyclic nucleosides revisited  
(K.L. Seley).
11. Unusual analogues of nucleosides: chemistry and biological activity  
(J. Zemlicka).
12. Lithiation-based silylation and stannylation for nucleoside synthesis  
(H. Kumamoto *et al.*).
13. Purine metabolism in parasites: potential targets for chemotherapy  
(M. el Kouni).
14. Antiviral  $\beta$ -L-nucleosides specific for hepatitis B virus infection  
(D.N. Strandring *et al.*).
15. Antiviral activity of nucleoside analogues: the BVDU connection  
(E. DeClercq).
16. The role of the cellular deoxynucleoside kinases in activation of nucleoside analogs used in chemotherapy  
(S. Eriksson *et al.*).
17. Cellular transport of nucleotide analogs  
(T. Cihlar *et al.*).
18. 5-Aza-7-deazapurines: synthesis and properties of nucleosides and oligonucleotides  
(F. Seela, H. Rosemeyer).
